JACOB E. MILLER

Denver, CO | 720-636-1085 | millerjacob67@gmail.com
jacobmiller.dev | github.com/mille409Fog | linkedin.com/in/jacob-miller-485603146

Professional Summary

Product-minded senior full-stack engineer with 8+ years building production software at scale, shipping features end to end from database and API to UI: Python (Django, FastAPI) and Node.js services alongside C#/.NET and Java/Spring; JavaScript/TypeScript front ends in React and Angular; PostgreSQL and SQL Server. Owned checkout, pricing, and payment flows for 30M+ customers from design through results after launch, measured with A/B tests. Upholds code review, test coverage, and observability; mentors engineers. Uses LLM coding tools (Claude Code) daily, reviewing and testing all AI-generated changes. B.S. Mathematics; passed SOA actuarial Exams P and FM.

Technical Skills

Languages: Python, JavaScript, TypeScript, SQL, C#, Java, Swift, HTML, CSS, F#
Frontend & Mobile: React, Angular (incl. v22), RxJS, Blazor, iOS (Swift, SwiftUI), UI component libraries, accessibility, Figma
Backend & APIs: Django, FastAPI, Node.js, REST APIs, GraphQL, microservices architecture, ASP.NET, Spring (Boot, MVC, Batch)
Data & Observability: Data modeling, SQL Server, T-SQL, PostgreSQL; Splunk, Azure Monitor, production dashboards
Cloud & DevOps: GitLab CI/CD pipelines, Git, Docker, AWS EKS, Azure, Azure DevOps, infrastructure as code (YAML; Terraform, working)
Testing: Automated testing (unit, end-to-end): xUnit, JUnit, Selenium, Serenity, Karma
AI-Assisted Development: Claude Code (Claude Opus 5.5), daily: agentic LLM workflows with sub-agents
Practices: Code review, feature flags, A/B testing, canary releases, design documents (Figma, Chalk), Agile, mentoring, on-call

Professional Experience

Senior Software Engineer | Charter Communications, Denver, CO — June 2023 – October 2026

- Designed and launched multiple new revenue flows on Spectrum's primary applications, deployed across web, iOS, and Android to 30M+ customers and generating multi-million-dollar revenue; owned each from concept through launch across the full stack, from TypeScript/Angular UX entry points implemented from Figma designs through GraphQL APIs, pricing, and payment exchange; released gradually with feature flags, A/B tests, and canary deployments.
- Hardened enterprise data pipelines across multiple environments, reducing pipeline failures by ~20%; defined environments and deployments as code in a parallel YAML-based repository system.
- Led a codebase-wide modernization across ~50 services using a proprietary dynamic framework, improving maintainability and developer velocity.
- Reviewed merge requests as a core part of the senior role, mentored fellow engineers, and maintained a proprietary UI component library.
- Served in the on-call rotation and supported production deployments for customer-facing applications, triaging and resolving production issues.

Software Engineer | Feature 23, Denver, CO — March 2021 – June 2023

- Built an enterprise web application (Angular, C#, Blazor, T-SQL) handling high-volume transaction flows for a major financial clearinghouse; implemented comprehensive xUnit and Selenium test coverage.
- Developed a tax filing application for a government entity (Angular, C#, SQL) deployed on Azure Government, ensuring compliance with security and regulatory standards.
- Built iOS features in Swift for a therapy dog app serving veterans.

Software Engineer | Walmart Labs, Bentonville, AR — August 2018 – March 2021

- Built Java/Spring (Boot, MVC, Batch) microservices processing POS terminal device telemetry across Walmart's U.S. store network; developed a parallel Node.js/Meteor.js service suite and delivered the full React front end.
- Engineered a dynamic financial management application in Angular with fully configurable fields, backed by Java/Spring services for data processing and dissemination; achieved broad test coverage with JUnit, Serenity, and Karma.

Projects

Hotel Operations Demo | jacobmiller.dev | GitHub — Angular | FastAPI | Vercel

- Built and deployed a full-stack Angular and Python/FastAPI app on Vercel: a hotel operations demo in which every number on screen is read from a real database row, built with Claude Code and reviewed change by change.

Education & Certifications

- **B.S. Mathematics** — Western Washington University, 2016; Putnam exam representative; Phi Eta Sigma, Golden Key
- **Society of Actuaries:** Exam P — Probability (2017); Exam FM — Financial Mathematics (2018)
