Senior full-stack engineer with 8+ years building payment, transaction and regulated systems for telecom, fintech, retail and government: Angular and React front ends over C#/.NET, Java/Spring, Node.js and Python.

EXPERIENCE

Charter Communications (Spectrum) · Senior Software Engineer · Denver, CO — June 2023 – October 2026

- Designed and launched new revenue flows on Spectrum's web, iOS and Android apps, reaching **30M+ customers** and generating multi-million-dollar revenue.
- Owned each flow from concept to launch: Angular UX from Figma designs through GraphQL APIs, pricing and payment exchange, released behind feature flags, A/B tests and canaries.
- Built continuous mutation testing into AI-assisted test generation when Kiro adoption surged MR volume; built in a week, adopted org-wide in two, **cutting bug reports 40%**.
- Led modernization of **~50 services** on a proprietary framework; hardened data pipelines, **cutting failures ~20%**.
- Reviewed merge requests, mentored engineers, maintained a proprietary UI component library, and served on call.

Feature 23 · Software Engineer · Denver, CO — March 2021 – June 2023

- Built an enterprise web application (Angular, C#, Blazor, T-SQL) handling high-volume transaction flows for a major financial clearinghouse, covered by xUnit and Selenium.
- Built a government tax filing application on Azure Government, to its security and regulatory standards.
- Wrote third-party sync code against reverse-engineered vendor schemas, with retries, backoff and idempotent writes.
- Built mobile features in Swift (an iOS therapy-dog app serving veterans) and Kotlin (Android).

Walmart Labs · Software Engineer · Bentonville, AR — August 2018 – March 2021

- Built Java/Spring Boot microservices processing POS terminal telemetry across Walmart's U.S. store network, a parallel Node.js/Meteor.js service suite, and its full React front end.
- Built a financial management app with fully configurable fields (Angular, Java/Spring), tested with JUnit, Serenity and Karma.

PROJECTS

Hotel Operations Demo · jacobmiller.dev · github.com/mille409Fog/ethereal-hotel — Angular · FastAPI · Vercel

Full-stack app where every on-screen number comes from a real database row; built with Claude Code, reviewed by hand.

ATS Screener · github.com/mille409Fog/ats-screener — Python · pytest · GitHub Actions

CLI checking PDF parsing, keyword coverage and knockout criteria against a job posting; Claude API rubric; 38 tests.

SKILLS

Languages	TypeScript, JavaScript, C#, Java, Python, SQL, Swift, Kotlin, F#
Frontend	Angular, React, RxJS, Blazor, SwiftUI, Android, component libraries, accessibility
Backend & data	ASP.NET Core, EF Core, Spring Boot, Node.js, FastAPI, Django, GraphQL, REST, SQL Server, PostgreSQL
Delivery	GitLab CI/CD, Azure DevOps, Docker, AWS EKS, Azure, Splunk, Azure Monitor, feature flags, YAML IaC
Testing	Jest, Karma, pytest, xUnit, JUnit, Selenium, Serenity, mutation testing
AI-assisted	Claude Code daily, agentic workflows with sub-agents, every change tested

EDUCATION

B.S. Mathematics — Western Washington University, 2016 · Putnam exam representative · Phi Eta Sigma · Golden Key

SOA Exam P — Probability (2017) · SOA Exam FM — Financial Mathematics (2018)
